

## Listed Investment Companies

### July 2025 performance review and sector update

**Conviction ideas:** Our preferences within each sector are based on numerous quantitative and qualitative factors. Table 1 on page 3 provides a sector update, with our estimated current net tangible assets (NTAs).

#### Traditional LICs

The ASX 200 Accum. Index advanced 2.4% in July, continuing its winning ways from the prior three months. Pleasingly, performance across the traditional LICs edged ahead of the market, returning 2.6% on average on a pre-tax net tangible asset (NTA) basis. From a total shareholder return (TSR) perspective, traditional LICs saw greater outperformance, adding 4.4% on average.

Preferred LIC **Australian United Investment Company (AUI)** outperformed the broader market for July, returning 2.6% on an NTA basis. AUI remains our pick for those seeking a traditional LIC trading at a discount. The fund currently trades at an estimated 15.1% discount, below its 1- and 3-year average discounts of 13.6% and 10.6%. The gross yield sits at 5.6% on a trailing basis.

Our second preference remains **BKI Investment Company (BKI)** given its yield and discount to NTA. BKI is currently trading at an estimated 8.5% discount and offers a trailing gross yield of 6.2%.

#### Large Capitalisation

**Perpetual Equity Investment Company (PIC)** is our preferred large cap LIC. Given current market conditions, we believe PIC's focus on quality and value positions it to perform well over the longer term. Further, PIC provides a healthy income stream to investors, currently yielding 8.9% on a gross trailing basis, and is trading at an estimated 2.4% discount.

#### Small Capitalisation & Specialist

Our preference among the small cap LICs is **WAM Research (WAX)**. Despite trading at a premium, which we believe is justifiable given the performance, WAX is currently well below the excessive premiums seen in recent years, and offers a gross yield in excess of 10%.

Our specialist preference remains **Regal Investment Fund (RF1)** given the unique access this vehicle provides to several of Regal's strategies.

#### International

**MFF Capital Investments (MFF)** remains our preferred international LIC. MFF's performance has been impressive, returning 19.7%, 22.9% and 16.7% on a pre-tax NTA basis over 1-,3- and 5-year time horizons, and is currently trading at an estimated 11.7% discount.

Our second pick in the international category is **PM Capital Global Opportunities Fund (PGF)**. While the long-term performance remains strong and among the best in class, given its premium to NTA, we currently believe MFF Capital Investments provides a better opportunity.

*Disclosure: Ord Minnett acted as Joint Lead Manager in a capital raising PM Capital Global Opportunities Fund Limited (PGF) in July 2024 and Regal Investment Fund (RF1) in November 2024 and received fees for acting in these capacities. Ord Minnett acted as a Joint Lead Arranger and Joint Lead Manager in the IPO of Whitefield Income Limited (WHI) in November 2024. Ord Minnett acted as a Joint Lead Manager in the IPO of WAM Income Maximiser (WMX) in March 2025. Ord Minnett may do business with and receive commission and/or fees from companies that are the subject of this report.*

## Around The Grounds: LIC News

### Platinum LICs (PMC and PAI) - Update

- As discussed in previous reports, Platinum has been pursuing a scheme of arrangement whereby Platinum Capital (PMC) and Platinum Asia Investments (PAI) will be transitioned in the listed ETF versions of their respective strategies - Platinum International Fund ETF (PIXX) and Platinum Asia Fund ETF (PAXX). The rationale for the restructure is to address the persistent discounts that have plagued both PMC/PAI for some time.
- We summarise the latest developments since our latest publication below:

#### Platinum Capital (PMC)

- In early August, PMC announced it withdrew the scheme as it did not believe it would receive sufficient support to meet the 75% approval threshold required given L1 Capital had taken an ~17% stake in the company and intended to not vote in favour.
- PMC has received a proposal from L1 Capital for the existing management agreement with Platinum to be terminated and for PMC to enter into a new management agreement with L1 Capital, such that L1 Capital would manage the investment portfolio in line with its Global Long Short investment strategy. The proposed strategy is the same the L1 Long Short Fund Ltd (LSF), but with no geographic constraints.
- Since then, shareholders (including L1 Capital) have voted in favour of an on-market buy-back for up to 50% of PMC's shares outstanding, although it cannot buy back more than 20% of the company's shares in the period prior to the extraordinary general meeting requisitioned by L1 Capital. PMC is of the view that the proposed on-market buy-back provides a liquidity mechanism for shareholders who wish to exit, some or all of their investment, closer to NTA.
- The most recent development has been a competing proposal from Wilson Asset Management (WAM) to terminate Platinum's existing management agreement. Under the proposal, WAM would employ its existing WAM Global (WGB) strategy to manage the portfolio.
- As it currently stands, PMC is currently taking steps to call the extraordinary general (EGM) meeting requisitioned by L1 Capital. Both L1 and WAM have nominated three director candidates, which will be up for election at the upcoming EGM (date TBC). The board that is in place following the EGM will assess the proposals.
- There is no certainty that either proposal will result in a binding transaction. Any change to the investment manager would be subject to shareholder approval. More to come...**

#### Platinum Asia (PAI)

- Following shareholder and court approval, the scheme became effective from 18 August.
- Shares will be exchanged for units in Platinum Asia Fund Complex ETF (PAXX) on Monday, 25 August, with new PAXX units to commence trading the following day (26 August). The number of units issued for each share will be based on PAI's post-tax NTA, adjusted for transaction costs, as at the close of global markets on Friday, 22 August, with the final exchange ratio to be announced on 25 August. PAI will also pay an amount approximately equal to the company's retained earnings as at 22 August, after taking into account restructure costs, as a special dividend.

### PM Capital Global Opportunities Fund – FY26 dividend guidance

- PGF has announced it expects to deliver a minimum 12.5 cents of fully franked dividends in FY26, achieved through an interim dividend of at least 6.0 cents and final dividend of at least 6.5 cents and intends to maintain this rate going forward for the medium-term. This marks a 9% increase from the 11.5 cents of fully franked dividends paid to shareholders in FY25.
- Based on PGF's closing share price of \$2.79 on 19 August 2025, the FY26 dividend represents an annual dividend yield, grossed up for franking credits, of 6.1%.
- As at 30 June 2025, PGF had a combination of retained earnings and profit reserves equal to \$435 million, sufficient to maintain the minimum intended dividend rate for 7.3 years.

## NTA performance calculation methodology

- Unless stated otherwise, NTA performance in this report is calculated on pre-tax NTA basis, which refers to net tangible assets after tax paid but before tax on unrealised gains as well as cash dividends paid during the relevant period. TSR performance figures from Bloomberg and calculated with re-invested dividends. Active return refers to the TSR relative to that of the comparative index.
- LIC performance measurements reflect performance after all operating expenses and taxation. Using index benchmarks often understates performance as the indices used are before all operating expenses and tax. Total shareholder returns are often negatively impacted by capital events such as options, DRPs, share purchase plans and placements. Dividend yields contained within are historical and are not an indication of future dividend payments.

## Australian United Investment Company (AUI)

[www.aui.com.au](http://www.aui.com.au)

- AUI was founded in 1953 by the late Sir Ian Potter and The Ian Potter Foundation.
- AUI utilises a “traditional” investment philosophy, focusing on risk reduction by investing in a range of large and mid-cap companies on the ASX.
- Investments are chosen on their individual merits, with no pre-determined policy that any particular proportion of the capital will be invested in particular investment sectors.
- The total shareholder return for the year ending 31 July 2025 was 12.5%, with pre-tax NTA increasing 12.7%. The active return (TSR) was 0.7%.

## Perpetual Equity Investment Company (PIC)

[www.perpetualequity.com.au](http://www.perpetualequity.com.au)

- Perpetual Equity Investment Company listed on 18 December 2014 and is managed by Perpetual. As at 31 March 2025, Perpetual had \$11.9 billion in Funds Under Management (FUM) across their various equity funds.
- PIC follows an extensive bottom-up investment approach, focusing on quality, undervalued companies. The portfolio is made up of predominantly high-quality Australian equities, typically with a mid-cap bias. Additionally, a global allocation is included, which can be up to 35% of the portfolio.
- Given the current backdrop of global macroeconomic uncertainty, stretched valuations and geopolitics are likely to constrain growth and underpin further volatility in the short to medium term, we believe PIC's focus on quality and value positions them to perform well over the longer term.
- As at 31 July, PIC had a 22.3% exposure allocated to international securities and held 6.2% of the portfolio in cash.
- The total shareholder return for the year ending 31 July 2025 was 12.2%, with pre-tax NTA increasing 2.9%. The active return (TSR) was 0.3%.

## WAM Research (WAX)

[www.wilsonassetmanagement.com.au](http://www.wilsonassetmanagement.com.au)

- Listed since 2003, WAM Research provides investors with exposure to a diversified portfolio of undervalued growth companies, which are generally small-to-medium sized industrial companies listed on the ASX.
- WAM Research's investment objectives are to provide a stream of fully franked dividends and achieve a high real rate of return, comprising both income and capital growth.
- The total shareholder return for the year ending 31 July 2025 was 16.3%, with pre-tax NTA increasing 13.0%. The active return (TSR) was 4.8%.

## LIC Basics

### What is a LIC?

- A LIC has characteristics of managed funds and stock exchange-listed companies.
- A LIC is a company that invests in other companies, with the purpose of giving its shareholders exposure to a variety of shares via its investment portfolio.
- LICs may also invest in cash or fixed income instruments, although in many cases this forms only a relatively small proportion of their investment portfolio.
- Income from LICs usually takes the form of semi-annual dividend payments that are linked to the profitability of the portfolio. Capital gains (losses) can arise where the investor sells the shares in the LIC for more (less) than they originally bought them for.

### Benefits of investing in LICs

#### Diversification

- Investment in just one LIC potentially gives an investor exposure to a number of companies in a range of industries.
- This diversification can reduce the volatility of returns across the portfolio.
- A LIC can be a cost-effective method of achieving diversification.

#### LICs are managed by investment professionals

- Each LIC is managed by full-time investment professionals whose goal it is to optimise returns on the investment portfolio for shareholders within strictly enforced risk parameters.
- In this respect, LICs are passive investments. Once the shares in the LIC have been purchased, the investor leaves investment decisions to the LIC manager.
- Some LICs have operated for more than 50 years while others, although only recently listed, are operated and managed by investment firms that have built strong reputations over many years.

#### Transparent investment philosophy

- LICs are typically transparent about their investment philosophy and process. Investors can choose the relevant LIC based on their own investment goals and risk preferences.
- Some LICs focus on specific geographic areas (such as Australia or overseas), may invest in a range of industries or focus on just one (such as resources), or are geared towards providing investors with annual income streams or longer-term capital gains (or a combination of both).
- In this document, we briefly describe each of the 64 selected LICs, their main investments and recent performance.

#### Ease of investment

- Investing in a LIC is done in the same manner as any other company on the ASX, by placing an order with your adviser to buy shares in it.
- Exiting the investment is just as straightforward: the investor sells the shares on-market during trading hours through their adviser.
- Most LICs are 'liquid', meaning there are enough willing buyers and sellers on the ASX, to allow the investor to enter or exit the investment at a time they choose.

### Costs involved in investing in a LIC

#### Entry costs

- Investing in the ASX via a LIC can be cost-effective relative to other methods of investing in a 'portfolio' of investments.
- The initial cost comes in the form of brokerage paid to acquire the shares, which can deliver an efficient method of diversification.
- The entry costs to LIC investments are generally lower than retail managed funds, which utilise a "front-end load" charge at the date of purchase.

**Ongoing costs**

- LIC managers can charge two types of fees: management and performance fees.
- LICs use management fees to cover the costs incurred in running the portfolio. These fees are taken out of the profits of the LIC, which are a function of the performance of the underlying investment portfolio (including dividends paid and capital gains/losses on shares that are sold). Managers are paid regardless of the profitability of the investment portfolio.
- These fees typically range from 0.0%-2.0% of assets under management per year. This can be lower than the average fees charged for retail managed funds. The effect of this cost-saving on a longer-term investment, where returns compound over many years, can be material. One reason for this lower cost is that LICs do not incur back-office or distribution costs, reducing their cost of operation. The fees (calculated as a “management expense ratio” or MER) of our selected LICs are shown in Table 2.
- Unlike management fees, performance fees are paid only if the LIC’s investment portfolio outperforms a predetermined benchmark. The fee is charged on the size of this outperformance. Not all LICs charge performance fees.
- These fees provide an incentive for the LIC manager to optimise returns for shareholders. Note performance fees in some instances can still be paid when a portfolio incurs a loss over an investment period if it still outperforms its relevant benchmark.
- Performance fees for our selected LICs are shown in Table 2 on page 7. The benchmark index is the S&P/ASX All Ordinaries Accumulation Index unless otherwise stated below.

**Exit costs**

- Brokerage is payable when selling shares in a LIC. Retail managed funds on the other hand, can generally be exited at no charge.
- Exiting a LIC investment can have tax consequences based on the capital gain or loss over the investment period.

**What income do investors receive from a LIC?**

- Annual investor income from a “buy-and-hold” investment strategy in a LIC takes the form of dividends, just like other share investments.
- However, because LICs utilise a company structure, payment of dividends is at the discretion of the LIC manager. In other words, just because the investment portfolio of the LIC has made a profit in a given year, it does not mean that all, or even any, of that profit will be paid to shareholders in that year. Where a LIC chooses not to pay a dividend, the income is retained and invested by the LIC and forms part of the LIC’s underlying asset backing. This is different to retail managed funds, which are required to pay out the income to unitholders in the particular tax year that it is earned. Generally, LICs will pay out a high proportion of earnings as dividends.
- A number of our selected LICs invest in blue chip stocks and pay out a high proportion of earnings as a dividend. Accordingly, they can have attractive dividend yields (as shown in Figure 1).

**Taxation issues**

- LIC returns are generally taxed at the company tax rate of 30%. Accordingly, when dividends are paid to shareholders of the LIC franking credits are attached. These can be a tax benefit for shareholders, as they receive a “credit” for the company tax already paid on the LIC income when the shareholder’s ordinary income is assessed.
- Capital gains are managed by the LIC manager. Where the dividend paid to a shareholder of a LIC contains capital gains, it will be treated as a capital gain, not ordinary income, in the hands of the shareholder.
- This tax treatment contrasts with that of unlisted retail managed funds, where investors incur an annual tax liability on interest and capital gains that the fund earns each year.

## LIC Discounts and Premiums

- The price at which investors buy or sell LICs, as with stocks is ultimately determined by supply and demand in the market. As a result, the price of a listed investment company can trade above or below its net tangible asset (NTA) value. That is, trade at a premium or discount, respectively.
- LICs may trade at a discount if:
  - The underlying fund has a poor performance track record.
  - The LIC has yet to pay dividends, has recently reduced its dividend or the market anticipates it has limited ability to pay future dividends.
  - The LIC has a limited track record, rapport with investors or has limited marketing and/or distribution capability.
  - The LIC has issued options which could substantially dilute the NTA of other unit holders if exercised.
  - The LIC has less liquidity.
  - LICs may trade at a discount to pre-tax NTAs if the LIC has a significant tax liability.
- LICs may also trade at a premium if:
  - The underlying portfolio has a strong performance track record.
  - The fund has a history of maintaining or increasing dividends. Many LIC investors have historically preferred vehicles paying stable fully franked dividends.
  - If an LIC has a substantial franking credit balance or tax asset.
- Many LICs have exhibited a tendency for discounts and premiums to mean revert and trade around a certain level. This tendency has provided an opportunity for investors to profit from mean reversion for LICs trading at a discount. However, this reversion can take time and rely on certain catalysts. We also note that a discount can deepen before it narrows.
- Some listed investment companies which trade at a premium may continue to trade at premium for the foreseeable future, or trade at an even larger premium.

## LICs versus managed funds

- LICs are listed on the stock exchange, so entry and exit costs are limited to brokerage. This means that diversification may be achieved at a relatively lower cost. LICs also offer a tax-effective structure, whereby dividends are typically fully franked and when LIC capital gains are paid out as dividends, investors may be entitled to an income tax reduction for the proportion of the dividend attributable to the capital gain. Investors in managed funds may incur a tax liability on interest and capital gains.
- The fee structures of LICs can be favourable in comparison with managed funds. Our selected traditional LICs have management expense ratios ranging from 0.0% to 2.5%, whereas managed funds often charge more than 1.0%.

## LICs versus exchange traded funds (ETFs)

- LICs and ETFs have low management fees and efficient tax structures compared with managed funds. However, ETFs have an open-ended structure, where units on offer can increase or decrease based on supply and demand. This mechanism allows ETFs to trade at or close to their net asset value.
- ETFs are generally passive investment products and hence do not aim to outperform the market in the same way many of the LICs do. There are an increasing number of Exchange Traded Managed Funds though that offer active management and avoid variation from NTA.
- ETFs are required to distribute any surplus income to security holders, whereas LICs can conserve surplus income and take advantage of market opportunities as they see fit. This added flexibility is beneficial to the shareholder.

## Guide to Ord Minnett Recommendations

**Our recommendations are based on the total return of a stock – nominal dividend yield plus capital appreciation – and have a 12-month time horizon.**

<b>SPECULATIVE BUY</b>	We expect the stock's total return (nominal yield plus capital appreciation) to exceed 20% over 12 months. The investment may have a strong capital appreciation but also has high degree of risk and there is a significant risk of capital loss.
<b>BUY</b>	The stock's total return (nominal dividend yield plus capital appreciation) is expected to exceed 15% over the next 12 months.
<b>ACCUMULATE</b>	We expect a total return of between 5% and 15%. Investors should consider adding to holdings or taking a position in the stock on share price weakness.
<b>HOLD</b>	We expect the stock to return between 0% and 5%, and believe the stock is fairly priced.
<b>LIGHTEN</b>	We expect the stock's return to be between 0% and negative 15%. Investors should consider decreasing their holdings.
<b>SELL</b>	We expect the total return to lose 15% or more.
<b>RISK ASSESSMENT</b>	Classified as Lower, Medium or Higher, the risk assessment denotes the relative assessment of an individual stock's risk based on an appraisal of its disclosed financial information, historical volatility of its share price, nature of its operations and other relevant quantitative and qualitative criteria. Risk is assessed by comparison with other Australian stocks, not across other asset classes such as Cash or Fixed Interest.
