April 2023 performance review and sector update

Conviction ideas: Our preferences within each sector are based on numerous quantitative and qualitative factors. Table 1 on page 2 provides a sector update, with our estimated current net tangible assets (NTAs) derived from our model portfolios.

Traditional LICs

The ASX 200 Index returned 1.9% throughout April and is up 5.2% YTD. All sectors over the year have returned positive gains, with the Information Technology, Communication Services and Consumer Discretionary sectors providing the best returns so far, gaining 22.2%, 13.2%, and 11.8%, respectively. Traditional LICs for the month were up 0.6% on a Total Shareholder Return (TSR) basis and 2.4% on a pre-tax net tangible asset (NTA) basis.

Preferred LIC **BKI Investment Company** (BKI) returned 0.6% TSR and 2.3% on a pre-tax NTA basis. The fund currently trades on an estimated discount to NTA of 4.8%, below its 1- and 3-year average discounts of 1.0% and 3.0%. The fund has a trailing grossed up yield of 7.3%.

Another key preference, **Australian United Investment Company** (AUI), is our pick for those seeking a Traditional LIC trading at substantial discount. AUI currently trades at an estimated 10.8% discount to NTA compared with its 1- and 3-year average discounts of 7.5% and 5.0%, respectively. The fund returned 3.0% (TSR) in April.

Large Capitalisation

Key preference **WAM Leaders** (WLE) is trading at a 3.2% premium to NTA and has outperformed its benchmark over 3- and 5-year time horizons across both TSR and NTA growth. The fund has a trailing grossed up yield of 8.3%

A further key preference **L1 Long Short Fund** (LSF) is trading at an estimated 4.4% discount to NTA and continues to be the best outperformer on a 3-year time horizon across both NTA (15.0%) growth and TSR (28.1%) in our large cap universe. The fund's strategy since inception (Sep-14) has outperformed its benchmark by 13.3% p.a.

Small Capitalisation and Specialist

Preferred Small Cap LIC **WAM Microcap** (WMI) is trading at a 13.0% premium to NTA, below its 1- and 3-year averages of 17.3% and 14.3% respectively. WMI has outperformed its benchmark for NTA and TSR over numerous time horizons.

Preferred specialist LIC **Tribeca Global Natural Resources** (TGF) is trading at an estimated discount to NTA of 19.2%. Performance for the fund was challenging in April with Base Metals (-1.2%) and Battery Metals (-0.5%) the primary detractors. The LIC remains our preferred pick for its exposure to a diversified range of resources and an experienced investment team.

International

Overseas markets, as measured by the MSCI World Index, rose 3.1% in April and finished up 12.9% year-to-date on an AUD adjusted basis, with the AUD depreciating -1.0% in April and down -2.9% for the year-to-date relative to the USD. Preferred LIC **PM Capital Global Opportunities Fund** (PGF) is trading at an estimated 0.3% premium to NTA, above its average 1- and 3-year discounts. The fund has delivered strong outperformance against its benchmark on both TSR and NTA growth across 1-, 3-, and 5-year time horizons.

*NTA is last reported NTA, adjusted for any dividends past ex-date. Current premium and discount is based on the discount at date of last disclosed NTA date.

^AMGF has a target cash distribution yield of 4% p.a. paid semi-annually

NTA performance calculation methodology

- Unless stated otherwise, NTA performance in this report is calculated on pre-tax NTA basis, which refers to net tangible assets after tax paid but before tax on unrealised gains as well as cash dividends paid during the relevant period. TSR performance figures from Bloomberg and calculated with re-invested dividends. Active return refers to the TSR relative to that of the comparative index.
- LIC performance measurements reflect performance after all operating expenses and taxation. Using index benchmarks often understates performance as the indices used are before all operating expenses and tax. Total shareholder returns are often negatively impacted by capital events such as options, DRPs, share purchase plans and placements. Dividend yields contained within are historical and are not an indication of future dividend payments.

Australian United Investment Company (AUI)

www.aui.com.au

- AUI was founded in 1953 by the late Sir Ian Potter and The Ian Potter Foundation.
- AUI utilises a “traditional” investment philosophy, focusing on risk reduction by investing in a range of large and mid-cap companies on the ASX.
- Investments are chosen on their individual merits, with no pre-determined policy that any particular proportion of the capital will be invested in particular investment sectors.
- The total shareholder return for the year ending 30 April 2023 was 0.7%, with pre-tax NTA increasing 4.1%. The active return (TSR) was -0.9%.

Ord Minnett acted as Joint Lead Manager to the capital raising in April 2023 and received fees acting in this capacity.

L1 Long Short Fund (LSF)

www.l1longshort.com

- LSF listed in April-18 following a \$1.3bn raising. LSF has dual investment objectives to 1) seek to deliver strong, positive, risk-adjusted returns over the long term (being a period of more than five years); and 2) preserve capital.
- LSF utilises a fundamental, bottom-up research process to seek and identify mispriced securities with the potential to provide attractive risk adjusted returns. The manager may take short positions in companies it considers to be overvalued, or of low quality and/or over-gearred.
- The total shareholder return for the year ending 30 April 2023 was -0.5%, with pre-tax NTA decreasing -4.1%. The active return (TSR) was -3.4%.

WAM Microcap (WMI)

www.wilsonassetmanagement.com.au

- WMI (the company) listed in Jun-16 following a \$154m raising (the maximum targeted). WMI (at the time) was WAMI's fifth LIC, but the first specialised LIC focusing on listed ASX companies with a market capitalisation of less than \$300m at the time of purchase.
- WMI seeks to provide investors exposure to undervalued growth companies identified using WAMI's research and market driven investment process. There are no investment limits on industry, sector, or geographical allocations. Short selling is permitted; however, it will not exceed 50% of the value of the portfolio without prior board approval.
- Key sector exposures as at 30 April 2023 included Consumer Discretionary (21.5%), Industrials (16.7%), Information Technology (14.6%) and Financials (9.7%).
- The total shareholder return for the year ending 30 April 2023 was -13.0%, with pre-tax NTA decreasing -3.7%. The active return (TSR) was -3.6%.

Tribeca Global Natural Resources (TGF)

www.tribecaip.com/global-natural-resources

- The manager, Tribeca Investment Partners, is a specialist small and mid-cap equities investment manager. TGF listed in Oct-18 following a \$158m raise.
- TGF seeks to actively deliver superior risk-adjusted returns to investors through a combination of long and short, credit and commodity positions in the highly volatile natural resources sector. TGF invests across the end-to-end value chain within the resources sector.
- The manager employs a high conviction, bottom-up research approach coupled with specialist commodities knowledge to take advantage of valuation mispricing and relative value of the natural resources Market. TGF seeks to maintain detailed coverage of ~300 companies across the eight natural resources industry segments.
- The largest net exposures by sector as of 30 April 2023 included Base Metals, Uranium, Precious Metals, Oil & Gas, Battery Metals, Diversified, and Carbon Credits.
- The total shareholder return for the year ending 30 April 2023 was -30.6%, with pre-tax NTA decreasing -20.7%. The active return (TSR) was -37.8%.

LIC basics

What is a LIC?

- A LIC has characteristics of managed funds and stock exchange-listed companies.
- A LIC is a company that invests in other companies, with the purpose of giving its shareholders exposure to a variety of shares via its investment portfolio.
- LICs may also invest in cash or fixed income instruments, although in many cases this forms only a relatively small proportion of their investment portfolio.
- Income from LICs usually takes the form of semi-annual dividend payments that are linked to the profitability of the portfolio. Capital gains (losses) can arise where the investor sells the shares in the LIC for more (less) than they originally bought them for.

Benefits of investing in LICs

Diversification

- Investment in just one LIC potentially gives an investor exposure to a number of companies in a range of industries.
- This diversification can reduce the volatility of returns across the portfolio.
- A LIC can be a cost-effective method of achieving diversification.

LICs are managed by investment professionals

- Each LIC is managed by full-time investment professionals whose goal it is to optimise returns on the investment portfolio for shareholders within strictly enforced risk parameters.
- In this respect, LICs are passive investments. Once the shares in the LIC have been purchased, the investor leaves investment decisions to the LIC manager.
- Some LICs have operated for more than 50 years while others, although only recently listed, are operated and managed by investment firms that have built strong reputations over many years.

Transparent investment philosophy

- LICs are typically transparent about their investment philosophy and process. Investors can choose the relevant LIC based on their own investment goals and risk preferences.
- Some LICs focus on specific geographic areas (such as Australia or overseas), may invest in a range of industries or focus on just one (such as resources), or are geared towards providing investors with annual income streams or longer-term capital gains (or a combination of both).
- In this document, we briefly describe each of the 64 selected LICs, their main investments and recent performance.

Ease of investment

- Investing in a LIC is done in the same manner as any other company on the ASX, by placing an order with your adviser to buy shares in it.
- Exiting the investment is just as straightforward: the investor sells the shares on-market during trading hours through their adviser.
- Most LICs are 'liquid', meaning there are enough willing buyers and sellers on the ASX, to allow the investor to enter or exit the investment at a time they choose.

Costs involved in investing in a LIC

Entry costs

- Investing in the ASX via a LIC can be cost-effective relative to other methods of investing in a 'portfolio' of investments.
- The initial cost comes in the form of brokerage paid to acquire the shares, which can deliver an efficient method of diversification. A LIC can be an efficient method of diversification.
- The entry costs to LIC investments are generally lower than retail managed funds, which utilise a "front-end load" charge at the date of purchase.

Ongoing costs

- LIC managers can charge two types of fees: management and performance fees.
- LICs use management fees to cover the costs incurred in running the portfolio. These fees are taken out of the profits of the LIC, which are a function of the performance of the underlying investment portfolio (including dividends paid and capital gains/losses on shares that are sold). Managers are paid regardless of the profitability of the investment portfolio.
- These fees typically range from 0.0%-2.0% of assets under management per year. This can be lower than the average fees charged for retail managed funds. The effect of this cost-saving on a longer-term investment, where returns compound over many years, can be material. One reason for this lower cost is that LICs do not incur back-office or distribution costs, reducing their cost of operation. The fees (calculated as a "management expense ratio" or MER) of our selected LICs are shown in Table 2.
- Unlike management fees, performance fees are paid only if the LIC's investment portfolio outperforms a predetermined benchmark. The fee is charged on the size of this outperformance. Not all LICs charge performance fees.
- These fees provide an incentive for the LIC manager to optimise returns for shareholders. Note performance fees in some instances can still be paid when a portfolio incurs a loss over an investment period if it still outperforms its relevant benchmark.
- Performance fees for our selected LICs are shown in Table 2 on page 7. The benchmark index is the S&P/ASX All Ordinaries Accumulation Index unless otherwise stated below.

Exit costs

- Brokerage is payable when selling shares in a LIC. Retail managed funds on the other hand, can generally be exited at no charge.
- Exiting a LIC investment can have tax consequences based on the capital gain or loss over the investment period.

What income do investors receive from a LIC?

- Annual investor income from a "buy-and-hold" investment strategy in a LIC takes the form of dividends, just like other share investments.
- However, because LICs utilise a company structure, payment of dividends is at the discretion of the LIC manager. In other words, just because the investment portfolio of the LIC has made a profit in a given year, it does not mean that all, or even any, of that profit will be paid to shareholders in that year. Where a LIC chooses not to pay a dividend, the income is retained and invested by the LIC and forms part of the LIC's underlying asset backing. This is different to retail managed funds, which are required to pay out the income to unitholders in the particular tax year that it is earned. Generally, LICs will pay out a high proportion of earnings as dividends.
- A number of our selected LICs invest in blue chip stocks and pay out a high proportion of earnings as a dividend. Accordingly, they can have attractive dividend yields (as shown in Figure 1).

Taxation issues

- LIC returns are generally taxed at the company tax rate of 30%. Accordingly, when dividends are paid to shareholders of the LIC franking credits are attached. These can be a tax benefit for shareholders, as they receive a “credit” for the company tax already paid on the LIC income when the shareholder’s ordinary income is assessed.
- Capital gains are managed by the LIC manager. Where the dividend paid to a shareholder of a LIC contains capital gains, it will be treated as a capital gain, not ordinary income, in the hands of the shareholder.
- This tax treatment contrasts with that of unlisted retail managed funds, where investors incur an annual tax liability on interest and capital gains that the fund earns each year.

LIC Discounts and Premiums

- The price at which investors buy or sell LICs, as with stocks is ultimately determined by supply and demand in the market. As a result, the price of a listed investment company can trade above or below its net tangible asset (NTA) value. That is, trade at a premium or discount respectively.
- LICs may trade at a discount if:
 - The underlying fund has a poor performance track record.
 - The LIC has yet to pay dividends, has recently reduced its dividend or the market anticipates it has limited ability to pay future dividends.
 - The LIC has a limited track record, rapport with investors or has limited marketing and/or distribution capability.
 - The LIC has issued options which could substantially dilute the NTA of other unit holders if exercised.
 - The LIC has less liquidity
 - LICs may trade at a discount to pre-tax NTAs if the LIC has a significant tax liability.
- LICs may also trade at a premium if:
 - The underlying portfolio has a strong performance track record.
 - The fund has a history of maintaining or increasing dividends. Many LIC investors have historically preferred vehicles paying stable fully franked dividends.
 - If an LIC has a substantial franking credit balance or tax asset.
- Many LICs have exhibited a tendency for discounts and premiums to mean revert and trade around a certain level. This tendency has provided an opportunity for investors to profit from mean reversion for LICs trading at a discount. However, this reversion can take time and rely on certain catalysts. We also note that a discount can deepen before it narrows.
- Some listed investment companies which trade at a premium may continue to trade at premium for the foreseeable future, or trade at an even larger premium.

LICs versus managed funds

- LICs are listed on the stock exchange, so entry and exit costs are limited to brokerage. This means that diversification may be achieved at a relatively lower cost. LICs also offer a tax-effective structure, whereby dividends are typically fully franked and when LIC capital gains are paid out as dividends, investors may be entitled to an income tax reduction for the proportion of the dividend attributable to the capital gain. Investors in managed funds may incur a tax liability on interest and capital gains.
- The fee structures of LICs can be favourable in comparison with managed funds. Our selected traditional LICs have management expense ratios ranging from 0.0% to 2.5%, whereas managed funds often charge more than 1.0%.

LICs versus exchange traded funds (ETFs)

- LICs and ETFs have low management fees and efficient tax structures compared with managed funds. However, ETFs have an open-ended structure, where units on offer can increase or decrease based on supply and demand. This mechanism allows ETFs to trade at or close to their net asset value.
- ETFs are generally passive investment products and hence do not aim to outperform the market in the same way many of the LICs do. There are an increasing number of Exchange Traded Managed Funds though that offer active management and avoid variation from NTA.
- ETFs are required to distribute any surplus income to security holders, whereas LICs can conserve surplus income and take advantage of market opportunities as they see fit. This added flexibility is beneficial to the shareholder.

Guide to Ord Minnett Recommendations

Our recommendations are based on the total return of a stock – nominal dividend yield plus capital appreciation – and have a 12-month time horizon.

| | |
|------------------------|--|
| SPECULATIVE BUY | We expect the stock's total return (nominal yield plus capital appreciation) to exceed 20% over 12 months. The investment may have a strong capital appreciation but also has high degree of risk and there is a significant risk of capital loss. |
| BUY | The stock's total return (nominal dividend yield plus capital appreciation) is expected to exceed 15% over the next 12 months. |
| ACCUMULATE | We expect a total return of between 5% and 15%. Investors should consider adding to holdings or taking a position in the stock on share price weakness. |
| HOLD | We expect the stock to return between 0% and 5%, and believe the stock is fairly priced. |
| LIGHTEN | We expect the stock's return to be between 0% and negative 15%. Investors should consider decreasing their holdings. |
| SELL | We expect the total return to lose 15% or more. |
| RISK ASSESSMENT | Classified as Lower, Medium, or Higher, the risk assessment denotes the relative assessment of an individual stock's risk based on an appraisal of its disclosed financial information, historic volatility of its share price, nature of its operations and other relevant quantitative and qualitative criteria. Risk is assessed by comparison with other Australian stocks, not across other asset classes such as Cash or Fixed Interest. |
